#### Introduction

The TIS700 series for automotive transient unifies the capabilities of an EFT/Burst P3a/3b, micro pulse P1/2a and the required coupling network into one box. The TIS700 series are equipped to meet all international, car manufacturer specifications, and kinds of waveform modules can be customized as per user's requirements. The current of built-in coupling network ranges up to 200A depending on the model. The built-in coupling network can be used and controlled by any unit of the LDS200 series, APG series and APS series to be the central EUT output port. Different simulators can be connected together via data bus and connected to PC via Ethernet to be a whole test system.
